

# Educational resources for primary school (6-14 years old)

ABOUT ZERO WASTE AND CIRCULAR ECONOMY

To effectively teach primary school kids about zero waste and the circular economy, it's essential to use hands-on activities that make abstract concepts tangible and relatable.

Incorporating storytelling, interactive games, and creative projects can help children understand the importance of reducing waste and reusing materials in their daily lives. Fostering a sense of responsibility and environmental stewardship through real-world examples and school-wide initiatives can further deepen their understanding and commitment to sustainable practices.
