

# Educational resources for high school students and beyond

ABOUT ZERO WASTE AND CIRCULAR ECONOMY

Teenagers and young adults enjoy interactive and hands-on learning, which makes it an effective way to teach them about sustainability. You can organize engaging and creative activities that encourage students to reduce waste, repurpose materials, and actively participate in environmental initiatives. Involving them in real-world projects, like starting a school garden or leading community clean-up drives and empowers them to see the direct impact of their actions and fosters lifelong sustainable habits.
